

# MARCELL

Motorized Alternative Refuel Cell

## An Innovative technology with environmental and economic benefits

### REDUCE EMISSIONS, DECARBONIZE YOUR ENGINE AND SAVE FUEL

Marcell is an HHO generator adapted to the majority of combustion engines (diesel, petroleum, natural gas, ethanol, propane, etc). Brown's gas, produced while the engine is running, is introduced via the cold air intake which acts as an accelerant maximizing the combustion of the fuel. This process results in more miles per gallon, improved engine performance and a significant reduction in emissions. Marcell will prolong the durability of the motor by preventing internal caking of carbon deposits.

Our range of Marcells are developed and calibrated to produce an optimal amount of HHO with low amperage so as not to strain the vehicle's alternator. The kit has been crafted to run with a minimal electricity loss. The various components assembled have been developed and structured to be fully compatible, thus making our product notably efficient.

### THE BENEFITS OF MARCELL

An increase in torque of up to **10%**

A fuel economy of up to **25%**

A reduction in exhaust emissions of up to **70%**

### EXPERIENCE DRIVING WITH PLEASURE

**Better handling** and mechanical performance

A **permanent upkeep** of your engines performance

Universally compatible kits, **ready to install** on all makes and models

Contact for local **garages who specialize in installations**

**Specially designed for all engine types**, from compact to heavy duty trucks

Applicable to agricultural, **commercial and industrial machinery**

A **5 year warranty** on all of our products
